pleated blinds

COSIFLOR VS 2 SLIDE COMFORT

When width does matter.

NEW

The tried-and-trusted adhesive technology for Cosiflor pleated and honeycomb blinds is now also being implemented for larger VS 2 models. A convenient handle bar has been designed for the newly developed Cosiflor VS 2 Slide Comfort model, making blind dimensions up to a width of 150 cm possible. This advantage is ideal for wide glass façades. The slim handle bar does away with projecting control elements, and a magnetic fixing ensures that the rail is held firmly in the upper position.

The VS 2 Slide Comfort model allows a fast installation. The adhesive rails are glued directly to the glass pane and can be removed without residue even years later. The system is clipped to brackets which are inserted at the rail ends. The blind is guided directly in the adhesive profile at the side, which means the blind does not wobble about even when the window is tilted. In addition, the light gap (particularly on standard windows) has been reduced to a minimum when the system is closed.

Technical Data:

Size range pleated / honeycomb

width (B)	min.	23 cm
	max.	150 cm
height (H)	min.	20 cm
	max.	220 cm

Rail colours

white Anthracite
